## *Operational Overview*

**Venturer** has been used extensively for Surface Demand Air and Nitrox diving operations in the UK North Sea. Clients generally fit their own IMCA compliant diving system, however this can be provided if required. Vessel is flat walk off rear deck, giving excellent access to the water and is fitted with a diving ladder.

Light ROV operations, including survey packages to meet client's requests.

Standby/Guard duties, Inshore surveys.

Passenger Transfer. Venturer is coded to carry 12 passengers and 2 crew. An ideal vessel for primary crew/passenger transfers or as a supporting vessel where large crews are to be transported on a daily basis.
